Summary

Third-year Computer Engineering student at Dr. D. Y. Patil Institute of Technology, specializing in full-stack (MERN) development. Solo hackathon winner with proven ability to build scalable, real-world web applications. Currently learning AI/ML to develop intelligent, data-driven systems.

Skills and Achievements

- **Full-stack Development:** Skilled in building scalable web applications using MERN-stack
- **Hackathon Winner:** Won an 8-hour hackathon in my college single-handedly
- **Leadership:** Event Manager, Team Devkraft-organized 24-hour statewide hackathon, secured sponsorship, coordinated participants from across Maharashtra

Education

Dr. D Y Patil Institute of Technology, Pimpri, BE in Computer Engineering Aug 2023 – 2027

- GPA: 8.5/10
- **Coursework:** DSA, OOP, CN, DBMS

Experience

XenoTech Solutions, Full-stack(MERN), Intern Dec 2025 – Current

- **Technology:** MERN Stack, REST APIs, Tailwind CSS, Git
- **Key role:** Designed and developed full-stack features, integrated frontend components with backend APIs, implemented role-based access control, and ensured scalable application architecture.
- **Project:** School ERP system to automate academic and administrative workflows for educational institutions.

Projects

Role-Based School ERP Management System Github

- Developed a role-based School ERP system to digitize and automate academic and administrative workflows for students, teachers, parents, admins and super-admins.
- Implemented core modules including attendance tracking, fee management, and secure role-based access control using scalable MERN architecture.

AI-Powered Personal Finance Management System Github

- Built an AI-based system to analyze user expenses and categorize the transactions
- Generated AI-driven insights and recommendations to improve budgeting and saving habits
- Designed modular architecture which supports Razorpay API.

Property Rental Website Github

- Built a property rental platform to manage property listings, reviews and authorization
- Implemented role-based authentication and session management for security access
- Integrated GEOCODING for property mapping and image upload functionality using cloud storage

Technologies

Languages: Javascript, JAVA, Python, SQL, C++

Tools: Git, Postman, Supabase, Firebase, Thunder Client, Cloudinary, MVC

Technologies: React.js, Node.js, Express.js, REST APIs, MongoDB, Tailwind CSS, Bootstrap, Cursor AI
